                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                840
                                                                 The present invention relates to a nucleic acid molecule encoding a delta 12-fatty acid epoxygenase enzyme. The invention is useful for genetically producting raw materials in the manufacture of industrial products including coating, composites, adhesives and plasticizers. The present sequence is the Stokesia laevis fatty acid epoxygenase cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              540

The present invention relates to a nucleic acid molecule encoding a delta 12-fatty acid epoxygenase enzyme. The invention is useful for genetically producing raw materials in the manufacture of industrial products including coating, composites, adhesives and plasticizers. The present sequence is the Vernonia galamensis epoxygenase cDNA. Note: The present sequence is described as SEQ ID NO:9 in the sequence listing. But SEQ ID NO:11 on the page 2 of the specification.
                                                                                                                                                                                     AGGCCATCAAGCCAATCTTGGGTGATTACAGGATGATCGACAGGACTCCATTTTTCAAAG

                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                             The present sequence encodes Vernonia galamenensis fatty acid epoxidising enzyme. The present invention also describes: (1) Vernonia galamenensis fatty acid desaturase; (i1) chimeric genes comprising the fragments linked to regulatory sequences; and (iii) transformed host cells containing the chimeric genes. The DNA's from the present invention can be used to alter levels of expression of the enzymes in transformed host cells or to produce the recombinant enzymes by transformed host microbial host cells. (Updated on 27-AUG-2003 to correct OS field.)

The invention relates to a transgenic plant containing at least one DNA construct comprising: (a) a nucleic acid encoding a polypeptide effective for catalyzing the conversion of a substrate to a C16, C18, or C20 monounsaturated fatty acid product; and (b) a regulatory element operably linked to the nucleic acid encoding the polypeptide and conferring expression in a vegetative tissue of the plant. Also described: (1) a method of making a transgenic plant; (2) an isolated nucleic acid comprising the nucleotide sequence; (3) a recombinant nucleic acid comprising the nucleotide sequence; (3) a recombinant nucleic acid construct comprising at least one regulatory element that confers expression in a vegetative tissue of a plant; and (4) a method of screening a transgenic plant for anthelmintic activity. The transgenic plant is useful in preparing compounds having anthelmintic activity. The present sequence encodes an epoxygenase which is used in the exemplification of the present invention.

The present invention relates to transgenic plants (I) containing one or more DNA constructs have a nucleic acid encoding a protein effective for catalyzing the conversion of a substrate to a 16C, 18C or 20C monounsaturated fatty acid product, e.g. a fatty acid cooxygenase or a fatty hydroxylase, and a regulatory element operably linked to the nucleic acid encoding the protein, where the regulatory element confers expression in vegetative tissue of the plant. The fatty caid epoxygenase or a fatty hydroxylase can be confersion acid acid proxygenase or a fatty hydroxylase can be confersion acid and epoxy-fatty acid, e.g., vernolic acid, e.g., ricinoleic acid and epoxy-fatty acid, e.g., vernolic acid, in cay expetative tissue. The DNA construct of (I) is useful in the production of hydroxylases and epoxygenases that controls nematode damage in commercially important plant species and so (I) is wibbits increased commercially important plant species and so (I) in exhibits increased commercially important plant species and so (I) in exhibits increased commercially important plant species and so (I) in exhibits increased commercially individue nematode metabolism, growth, viability, development, infectivity and/or the nematode life cycle. (I) provides

The invention relates to a transgenic plant containing at least one DNA construct comprising: (a) a nucleic acid encoding a polypeptide effective for catalyzing the conversion of a substrate to a cl6, Cl8, or C20 monounsaturated fatty acid product; and (b) a regulatory element operably linked to the nucleic acid encoding the polypeptide and conferring expression in a vegetative tissue of the plant. Also described: (1) a method of making a transgenic plant; (2) an isolated nucleic acid comprising the nucleotide sequence; (3) a recombinant nucleic acid construct comprising at least one regulatory element that confers expression in a vegetative tissue of a plant; and (4) a method of screening a transgenic plant for anthelmintic activity. The present sequence encodes an epoxygenase which is used in the This invention describes a novel isolated nucleic acid sequence (I)
encoding a Calendula officinalis calendulic acid desaturase polypeptide.
CC free invention also describes (I) a process for producing unsaturated
fatty acids, comprising introducing at least one copy of (I) or (II) into
an oil-producing organism, growing the organism, isolating oil from the
CC organism and releasing fatty acids from the oil, (2) a process for
producing triglycerides with an increased unsaturated fatty acid content,
CC producing organism, growing the organism and isolating oil from the
CC producing organism, growing the organism, isolating oil from the organism, (3) a process for producing saturated fatty acids, comprising
introducing organism, growing the organism, isolating oil from the organism, and releasing fatty acids from the oril; (4) a process for producing
CC triglycerides with an increased saturated fatty acid content, comprising
CC triglycerides with an increased saturated fatty acid content, comprising
CC triglycerides with an increased saturated fatty acid content, comprising
CC triglycerides with an increased saturated fatty acid content.
CC producing organism, growing the organism and isolating oil from the
CC organism; (5) an enzyme capable of converting a diunsaturated fatty acid
CC of to a triunsaturated fatty acid. Transgenic organism; (specially plants) containing one or more copies of (I) are useful for producing
CC organisms (especially plants) containing one or more norientated fatty
CC organisms (especially plants) containing one or more organisms content.
CC organisms (especially plants) containing one or more organisms (especially
CC organisms (especially plants) containing one or more organisms (especially
CC organisms (especially plants) containing one or more organisms
CC organisms (especially plants) containing one or more organisms
CC organisms (especially for producing oils with an increased saturated fatty
CC denomic sequences by homology screening. This sequence encodes the

The present invention relates to transgenic plants (I) containing one or more DNA constructs. The DNA constructs have a nucleic acid encoding a protein effective for catalyzing the conversion of a substrate to a 16C, 18C or 20C monounsaturated fatty acid product, e.g. a fatty acid encoding the conversion of a substrate to a 16C, 18C or 20C monounsaturated fatty acid product, e.g. a fatty acid epoxygenase or a fatty hydroxylase, and a regulatory element operably clement confers expression in vegetative tissue of the plant. The fatty clement confers expression in vegetative tissue of the plant. The fatty caid epoxygenase or a fatty hydroxylase can be phospholipididacylglycerol acyltransferase (DAGAT). (I) has an increased amount of hydroxy-fatty acid, e.g., ricinoleic acid and epoxy-fatty acid, e.g., vernolic acid, in a cycletative tissue. The DNA construct of (I) is useful in the production of hydroxylases and epoxygenases that controls nematode damage in commercially important plant species and so (I) exhibits increased controls infective, environmentally safe methods of inhibiting nematode metabolism, growth, viability, methods of inhibiting nematode metabolism, growth, viability, educing season-long nematode control, thus providing labor savings, by reducing

Also described: (1) a method of making a transgenic plant; (2) an isolated nucleic acid comprising the nucleotide sequence; (3) a recombinant nucleic acid construct comprising at least one regulatory element that confers expression in a vegetative tissue of a plant; and (4) a method of screening a transgenic plant for anthelmintic activity. The transgenic plant is useful in preparing compounds having anthelmintic activity. The present sequence encodes an epoxygenase which is used in the

```
The present invention relates to transgenic plants (I) containing one or more DNA constructs have a nucleic acid encoding a protein effective for catalyzing the conversion of a substrate to a 16C, protein effective for catalyzing the conversion of a substrate to a 16C, 18C or 20C monounsaturated fatty acid product, e.g. a fatty acid epoxygenase or a fatty hydroxylase, and a regulatory element operably linked to the nucleic acid encoding the protein, where the regulatory clement confers expression in vegetative tissue of the plant. The fatty acid epoxygenase or a fatty hydroxylase can be phospholipid:diacylglycerol acyltransferase (PDAT) or diacylglycerol acyltransferase (PDAT) or diacylglycerol acyltransferase (PDAT) or diacylglycerol acyltransferase (PDAT) (I) has an increased amount of hydroxylaty, acid, e.g., vernolic acid, in a vegetative tissue. The DNA construct of (I) is useful in the production a vegetative tissue. The DNA construct of (I) is useful in the production commercially important plant species and so (I) exhibits increased resistance to nematodes. (I) provides an effective, environmentally safe methods of inhibiting nematode metabolism, growth, viability, each of the present sequence is the need for and frequency of chemical control. The present sequence is

This cDNA clone, designated CrepX, codes for a novel epoxygenase (see AAW19743) of a Crepis sp. (not Crepis palaestina) that has a high termolic acid content. The CrepX gene shows a high degree of homology to the novel Cpala delta-12-epoxygenase gene (see AAV63101) of C. alaestina. CrepX cDNA was isolated from a Crepis sp. cDNA library using a Crepis alpina acetylenase partial gene sequence (see AAV63104) as probe. The invention relates generally to novel genetic sequences (see AAV63104) as probe. The invention relates generally to novel genetic sequences (see AAV63104) as provide the means by which fatty acid metabolism can be manibulated in e.g. yeast, mould, bacteria, insects, birds, mammals and plants

( especially oilseed plants such as flax), in particular to convert unsaturated fatty acids to epoxygenated fatty acids. The invention extends to genetically modified oil-accumulating organisms and to the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to transgenic plants (1) containing one or more DNA constructs have a nucleic acid encoding a protein effective for catalyzing the conversion of a substrate to a 16C, 18C or 20C monounsaturated fatty acid product, e.g. a fatty acid epoxygenase or a fatty hydroxylase, and a regulatory element operably linked to the nucleic acid encoding the protein, where the regulatory element confers expression in vegetative tissue of the plant. The fatty acid epoxygenase or a fatty hydroxylase can be phospholipididiacylalycerol acyltransferase (PDAT) or diacylglycerol acyltransferase (PDAT) or diacylglycerol acyltransferase amount of hydroxy-fatty acid, e.g., ricinoleic acid and epoxy-fatty acid, e.g., vernolic acid, in a vegetative tissue. The DNA construct of (1) is useful in the production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nematocide; Plant; 16C monounsaturated fatty acid; 18C monounsaturated fatty acid; 20C monounsaturated fatty acid; 20C monounsaturated fatty acid; 20C monounsaturated fatty acid epoxygenaes, fatty hydroxylase; phospholipid:diacylglycerol; acyltransferase; DAGT; diacylglycerol; acyltransferase; DAGT; hydroxy-fatty acid; ricinoleic acid; epoxy-fatty acid; vernolic acid; nematode; gene; ss; FAD2.

of hydroxylases and epoxygenases that controls nematode damage in commercially important plant species and so (1) exhibits increased resistance to nematodes. (1) provides an effective, environmentally safe methods of inhibiting nematode metabolism, growth, viability, development, infectivity and/or the nematode life cycle. (1) provides season-long nematode control, thus providing labor savings, by reducing the need for and frequency of chemical control. The present sequence is hydroxylase used to illustrate the invention. The encoded protein is a fusion protein where the N-terminal sequence of the epoxygenase and fatty.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               construct comprising: (a) a nucleic acid encoding a polypeptide effective for catalyzing the conversion of a substrate to a C16 C18 or C20 monounsaturated fatty acid product; and (b) a regulatory element operably linked to the nucleic acid encoding the polypeptide and conferring expression in a vegetative tissue of the plant. Also described: (1) a method of making a transgenic plant; (2) an isolated nucleic acid construct comprising at least one regulatory element that confers expression in a vegetative tissue of a plant; and (4) a method of screening a transgenic plant for anthelmintic activity. The transgenic plant is useful in preparing compounds having anthelmintic activity. The present sequence encodes an epoxygenase which is used in the
